Portfolio | Github | LinkedIn

Career Objective

Seeking opportunities to work with an experienced team of developers where I can contribute my MERN stack skills, keep learning, and grow into more advanced roles.

Skills

Expertise: JavaScript, Typescript, ES6, React.js, Next.js, React-Router, Node.js, Express.js, MongoDB, HTML, CSS, Tailwind CSS, DaisyUI, React-Hook-Form, Firebase Authentication, Better Auth.

Comfortable: JWT, Swiper.js, Tanstack Query, Stripe, SSLCOMMERZ

Familiar: Redux, Framer motion, Shadcn-UI, Hero-UI

Tools: Github, Netlify, Postman, Playwright, Vercel, VSCode, NPM, Chrome Dev Tool

Experience

Full Stack Developer (Self-initiated Projects)

2025 – Present

Designing and developing university-level projects using modern full-stack technologies, with a focus on scalability, responsiveness, and real-world business goals.

Projects

DailyMart Live Link | Client Repo | Server Repo

Overview: Daily Price Tracker for Local Markets

Feature -

- Secure login, JWT, and access control for Admin, Vendor, and User.
- User, Vendor, and Admin dashboards for products, orders, ads, and watchlists.
- Browse, filter, sort products, track price trends, and manage watchlists.

Tech Stack: React.js, Express.js, MongoDB, Tailwind CSS, Stripe, Firebase, JWT

Rentify Live Link | Client Repo | Server Repo

Overview: Group project for booking and managing rental properties and assets. My role for this project is to integrated SSLCOMMERZ payment gateway to handle rental payments and other transactions.

Feature -

- Authentication with email/password and Google login; role-based access for renters and owners.
- Listing creation and management with category-based forms and location mapping.
- Online payment system with SSLCOMMERZ and role upgrade for owners.
- Role-based dashboards for Renters, Owners, and Admins with management and analytics.

Tech Stack: Next.js, Express.js, MongoDB, Tailwind CSS, SSLCOMMERZ, JWT

BookNook – A Small Online Library Live Link | Client Repo | Server Repo

Overview: An online library where users can browse books, add books to the collection, borrow books, and return them.

Feature -

- Implemented book CRUD operations and a borrowing system with automatic stock updates.
- Added email/password and Google authentication using Better Auth, JWT, and protected routes.
- Built responsive pages for book management, borrow history, and user profiles with dark/light themes.

Tech Stack: Next.js, Typescript, Express.js, MongoDB, Tailwind CSS, HeroUI, Better Auth, JWT

Education

Daffodil International University
Bachelor of Science in CSE
